Write a python script that takes the above file as input log
In the above file all the runs that have ...ok will show all the PASSED logs
Towards the end if you search for the following it will list all the failed cases

```
==============================
Failed 10 tests - output below:
==============================

All content here should be displayed when I click on failed in the chart

======
Totals
======
```

I want you to write this into another screen where it should show something
like the following as attached screenshot

It should show as Passed log and failed log from this summary and when I
click on passed only the passed jobs should be shown and when I click on
failed only the failed jobs should be showed.

```
======
Totals
======
Ran: 1161 tests in 6275.0000 sec.
- Passed: 982
- Skipped: 169
- Expected Fail: 0
- Unexpected Success: 0
- Failed: 10
Sum of execute time for each test: 3855.1670 sec.
```
